ABOUT ME

Highly motivated and self-taught MERN Stack Developer with a strong commitment to continuous learning and professional growth. Eagerly seeking a challenging position to contribute my skills and expertise in web development. With a solid foundation in JavaScript, Node.js, Express, MongoDB, React, and Redux, I have successfully completed two impressive projects - an e-commerce website and a platform catered towards bike riders. These projects demonstrate my ability to work with cutting-edge technologies and deliver efficient, user-friendly solutions. With a strong emphasis on code quality, scalability, and security, I strive to create robust applications that exceed expectations.

PROJECTS

○ e-commerce(trendsetterfas.store)

TrendSetterFas.store is a dynamic e-commerce platform developed using the MVC architecture, offering both User and Admin Sides. On the Admin Side, administrators can efficiently manage users, products, and orders, along with accessing comprehensive sales reports. The User Side provides a seamless shopping experience with features like adding items to cart, creating wishlists, and applying coupons. Payment options include Cash on Delivery, PayPal, and Wallet. To enhance security, Node Mailer is used for email verification. This well-structured project showcases expertise in JavaScript, Node.js, Express, MongoDB, and EJS, delivering a robust and user-friendly online marketplace.
