ABOUT ME

Passionate Flutter developer with a strong background in creating mobile applications.I am genuinely enthusiastic about problem-solving, and I thrive in challenging situations where I can apply my analytical skills to develop efficient solutions. As a lifelong learner, I have a deep interest in expanding my knowledge and staying abreast of the latest trends and advancements in the world of mobile app development.

PROJECTS

FitX
A Fitness Training app

- Using this app users can perform exercises for verity muscle groups, The fitness trainers can apply for being trainer, If admin accept that they will be trainer, so users can message with trainers, user can track their calorie, weight and the transformation journey through this app.
- This app developed with BLOC pattern for code maintainability, testability and scalability.
- BLOC used for managing the state across the app
- As backend I used django, For that I used REST API .

https://play.google.com/store/apps/FITX

README
A Story reading app

- Using this app users can read different stories, app contains verity categories such as history, horror, romance etc. users can read pdf's trough this app
- This app used Firebase as backed, used firebase auth, firebase storage and firebase firestore

https://github.com/suhail9645/readme

https://play.google.com/store/apps/README

MINI PROJECTS

Netflix_clone

- This is is a netflix clone using TMDB API

https://github.com/suhail9645/netflix_clone

Camera_app

- This is a simple camera application using path provider ,users can take images and that shows in gridview.

https://github.com/suhail9645/camera_application

Student_manage

- This is a Student Management app ,this include basic CRUD operation with HIVE.
- I used BLOC for state Management
